

Operating and safety information

We recommend to observe the manual of the manufacturer as well as the following safety instructions to ensure the greatest possible safety.

Protect brushes when in storage against:

- Outside influences like extreme temperatures and humidity
- Contact with acids or vapour of acids
- Pressure to the bristles due to inappropriate storage

Please observe the following when operating:

- Test for correct position and assembly before application
- Do not undertake adjustments to the original brush body
- Only use for designated purpose
- Apply only to designated machinery
- Observe the specified speed of rotation
- The working speed is dependent on the respective application
- Avoid particles in the bristles
- Avoid excessive pressure to the brushes during sweeping

If you observe defects on the product it may not be put into operation!

By wearing the correct personal safety equipment safety can be additionally increased:

- Safety gloves and sturdy footgear
- Suitable protective clothing which covers arms and legs
- Safety goggles, possibly also mouth and dust mask
- Do not wear wide clothing or jewellery

Because of the extraordinary variety of different applications and machines these instructions focus on basic aspects of safety information only. For further recommendations and information please refer to relevant laws, standards and statutory regulations and safety instructions.
